2.1 Love

Love is a complex emotion, often characterized by behaviors that can be difficult to understand. We propose a metric to quantify love as follows:

Assumption 1 *Let A represent the behavior of one person and B represent the behavior of another person. We define love L from person B to person A as following:*

$$L_{B \to A} = \sum_{a \in A,\, b \in B} (P(b \mid a) - P(b))^2, \tag{1}$$

where P represents the probability of an behavior occurring.
